

Visual Service Centre

...making it easy for your customers to do business with you

VSC is a paperless real time information management and decision making tool developed for steel and aluminium service centres.

- Works orders are scheduled in real time (while the customer is on the phone) and displayed on the shop floor. Last minute changes are displayed to operators
- Sales staff have access to machine loadings and the status of current orders via a visual display
- Interfaces direct to line controllers downloading Length and Quantity
- Production Activity Monitor option for line utilisation in real time without operator input

System Benefits:

Increases your ability to make and keep promises

Makes it easier for your customers to do business with you

"Its all about increasing throughput, number of orders as well as tonnes"

APC Integration have over 10 years experience in developing manufacturing order execution systems.

Other system features:

- Interfaces to Sales order entry, Stock control and Accounts
- QA is all computer based reducing data storage and retrieval costs
- Traceability is provided from coil receipt to dispatched pack
- Interfaces to Slitter Head setup software
- Can be used with automated and manual work centres
- Feed coils are validated by barcode prior to running
- Built using open software development tools (.NET, MS SQL)
